PROFESSIONAL SUMMARY

- Backend-focused Software Engineer with 6+ years of experience building scalable web applications and RESTful APIs using Node.js, NestJS, and Express.js in fast-paced startup environments.
- Extensive knowledge and strong coding skills in **Node.js and DynamoDB**.
- Good Experience with **MySQL database**.
- **MEVN** stack development experience(MongoDB, Express, Vue.js, Node.js).
- Experience in working with **AWS CLI, S3, RDS, and other core AWS services (API Gateway, Lambda, Glue, Athena, etc.)**.
- Designed and implemented event-driven communication using **Amazon SQS** and **Amazon SNS** to decouple services and ensure reliable asynchronous processing.
- Good exposure to UI design using **Bootstrap, HTML, CSS, and JavaScript**.
- Worked extensively on **WebSockets**.
- Strong knowledge of **SQL concepts - CRUD operations** and aggregation framework.
- Experience in the design of a **MongoDB** database.
- Extensive knowledge in the Marketing and SCM domains, such as **GitHub and Bitbucket**.
- Develop and execute unit, functional, and integration testing of developed software components
- Developing user-facing applications using **Vue.js** and the **Vuetify UI framework**.
- Building modular and reusable components and libraries
- Highly proficient with the JavaScript language and its modern **ES6+** syntax and features.
- Experience with both consuming and designing **RESTful** APIs
- Proficient in the usage of **JSON** for faster and more impulsive responses
- Built a serverless error monitoring system using **AWS Lambda, CloudWatch subscription filters**, and **Bedrock(Claude AI)** for automated log analysis.

TECHNICAL SKILLS

- **Backend & API Development:** Node.js, NestJS, Express.js, RESTful APIs, WebSockets (Socket.IO)
- **Cloud & Serverless Architecture:** AWS Lambda, API Gateway, S3, CloudWatch (log monitoring & alerts), DynamoDB, Glue, Athena, Bedrock (Claude AI Integration)
- **Frontend Technologies:** Vue.js, Vuetify, React(Basic), JavaScript, HTML, CSS, Bootstrap
- **Databases:** DynamoDB, MongoDB, MySQL
- **Tools & Version Control:** Git (GitHub, Bitbucket, and AWS Code Commit), VS Code and Cursor
- **Systems:** Linux/Unix, Windows
- **Third-Party Integrations:** Payment (Razorpay and Stripe), Messaging (MSG91), Google APIs(Translations and Locations)

EDUCATION

- **Bachelor's Technology – Computer Science – 70%- KKCT - JNTUA University, Andhra Pradesh, India**

PROFESSIONAL EXPERIENCE

Client: Daolanto UG (haftungsbeschränkt) - Germany

Duration: January 2023 - Still

Roles through:

Employer 1: LeoIntelli Consulting Services - Hyderabad - Telangana (January 2023 - June 2025)

Employer 2: Storypeach Technologies Pvt Ltd (Wisemonk) - Bangalore (July 2025 - Present)

Role: Backend Developer

Project: Companion

- Companion is a Germany-based project developed to provide digital services to tourists.
- This product is used by customers such as museums, cities, hotels, etc. These customers add details for visitors to explore their items/services.
- We are developing two applications, one for customers and another for visitors as a digital guide.
- This Application was developed using AWS services and React.

Responsibilities:

- Designing and implementing RESTful APIs using AWS API Gateway.
- Managing API access control and authentication using custom authorizers(JWT).
- Developing serverless functions using AWS Lambda to execute business logic.
- Integrating Lambda functions with other AWS services like API Gateway, DynamoDB, S3, etc.
- Utilizing IAM roles and policies to manage permissions for Lambda functions.
- Designing and modeling NoSQL databases in AWS DynamoDB.
- Implementing CRUD operations and data manipulation in DynamoDB.
- Utilizing secondary indexes for improved data access.
- Working with AWS S3 to store and manage various types of data (e.g., files, images, backups).
- Integrating S3 with other AWS services like Lambda, Glue, and Athena.
- Using AWS Glue for ETL (Extract, Transform, Load) processes and data preparation.
- Defining data catalogs, crawlers, and jobs in AWS Glue for data ingestion and transformation.
- Querying and analyzing data using AWS Athena and SQL-like queries on S3 data.
- Built a serverless error monitoring system using AWS Lambda and CloudWatch subscription filters, integrated with Amazon Bedrock (Claude) for automated log analysis and intelligent error insights
- Designed and implemented event-driven communication using Amazon SQS and Amazon SNS to decouple services and ensure reliable asynchronous processing.

Environment: Node.js, AWS Lambda, API Gateway, DynamoDB, S3, CloudWatch, Bedrock

Employer: Indium Software(INDIA) Pvt Ltd - Chennai - Tamil Nadu

Role: Software Engineer

Project: Envisagenics - US, May 2022 - Oct 2022

- Envisagenics is a US-based project that was developed to track task statistics and create new tasks for its organization.
- It is an internal application. It was developed only for internal purposes.
- This Application was developed by using the Vuetify template.

Responsibilities:

- Developed user-facing applications using React & JavaScript with the creation of a RESTful Web service.
- Building modular and reusable components and libraries.
- Optimizing the application for performance
- Developed modules using the Vuetify UI framework

Environment: Vue.js, Vuetify, Linux, GIT, VS Code

Employer: Approlabs Pvt Ltd - Chennai - Tamil Nadu May 2021 - APR 2022

Role: Software Engineer (Backend)

Projects:

1) Reapmor & Freshpiks - Chennai, June 2021 - Dec 2021

- The Reapmor application was developed for farmers.
- This Application was developed using Node and NestJS, and the database is MySQL.
- Implemented Payouts using RazorPay to pay the amount to the farmers.

- Freshpik's application is like an E-Commerce app that provides vegetables and fruits.
- These two projects were developed at the same time.

2)22Yards - Chennai, Jan 2022 - APR 2022

- 22Yards application is a cricket-based application.
- This application is used to book grounds and tournaments and create a team to play cricket.
- This Application has a microservices architecture, developed using Node, Nest, and MongoDB.

Responsibilities:

- Developed web page and form validation with a team using AngularJS, Node.js, HTML5, CSS3 & JavaScript with the creation of a RESTful Web service.
- Developed the tools using Node.js and used MySQL for databases. Parsers are written in Node.js for extracting valuable data from the design database.
- Built the Web API on top of NestJS to perform REST methods. Used a MySQL database in Web API development.
- queried MYSQL database queries from Nest.js using Nest-MYSQL connector and MySQL DB package to retrieve information.
- Wrote scripts to parse XML documents and load the data into the database.
- Worked with JSON web tokens for authentication and authorization security configurations using Node.js.
- Outputting the parsed data as JSON and storing it in MySQL
- Extensively working with AWS like S3, ELB, EBS, Route53, CloudFront, IAM, Cloud Watch, RDS, etc.
- Developed Merge jobs in Node to extract and load data into the MySQL database.
- Worked on packages like socket, REST API
- Worked on MySQL database on simple queries and writing Stored Procedures for normalization.
- Implemented payment gateway using Razorpay and developed a message API using the msg91 gateway

Environment: Node.js, Nest.js, Angular.js, REST API, Microservices, JavaScript, AWS, MYSQL, Linux and GIT

Employer: Reveal IQ Pvt Ltd - Tirupati - Andhra Pradesh.

Role: Software Developer (Backend)

Project: Manasa Kidney Foundation, Tirupati, Aug 2019 – Apr 2021

- MKF is a Hospital management application to provide online services to patients.
- This application is mainly used to book Virtual OPs(Out Patients) and interact with doctors virtually.
- This application was developed using nodejs, WebSockets, and MongoDB.

Responsibilities:

- Developed web page and form validation with a team using Vue.js, Node.js, HTML5, CSS3 & JavaScript with the creation of a Socket Web service.
- I have extensively used Node.js for developing backend applications.
- Strong Expertise in working with server-side technologies, including databases, RESTful API, and MVC design patterns.
- Actively involved in the Initial software development life cycle (SDLC) of requirement gathering and in suggesting system configuration specifications during client interaction.
- Worked on MongoDB concepts such as locking, transactions, indexes, Sharding, replication, and schema design.
- Developed and implemented core API services using Node.js with TCP communication.
- Contribute to the client's development standard practices of Microservice architecture by developing reusable product extensions and writing knowledge articles based on experience.
- Developed REST Microservices, which are like APIs used for Home Automation. They also keep the data in synchronization between the two database services
- Contribute to the client's development standard practices of Microservice architecture by developing reusable product extensions and writing knowledge articles based on experience.
- Strong Socket programming experience in Node.js.

Environment: Node.js, Vue.js, WebSockets, Microservices, JavaScript, MongoDB, Linux, GIT, Jira, VS Code
